

NNIT 1,300 employees in the new domicile

In February 2012 the team at Novo Nordisk IT moved to an exciting new building in Søborg. The building is shaped like a double H with three office wings that provide effective office sqm and a flexible division of the building.

The building is designed by DesignGroup architects, developed and built by NCC Construction Denmark A/S. Green aspects have been considered since the building is listed by the European GreenBuilding rules, which means that it has an energy that is at least 25 % lower than the law otherwise requires as a minimum level.

danfloor had the honour to be selected as the supplier of carpets throughout the building, which also includes new headquarters of NCC Construction. danfloor has delivered 26,000 sqm. Classic Contract in a special colour and it is possible to mount all the carpets within 10 weeks.

The result is really nice.
